Treactivation of the alpha subunit of the El component of the alpha subunit of the El component of the pyruvate dehydrogenase complex.

Treactivation of the alpha subunit of the El component of the pyruvate dehydrogenase (lipoamide)] + phosphate.

THINTION: CATALYTIC ACTIVITY: [Pyruvate dehydrogenase (lipoamide)] + phosphate.

THINTICH ACTIVITY: Heterodimer of a catalytic subunit and a FAD protein of unknown function (By similarity).

SUBUNIT: Heterodimer of a catalytic subunit and a FAD protein of unknown function (By similarity).

SUBCELLULAR LOCATION: Mitochondrial matrix.

TISSUE SPECIFICITY: Highly expressed in liver.

TISSUE SPECIFICITY: Highly expressed in liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SECURNCE FROM N.A., AND INDUCTION.

-1- SUBGNIT: Homodimer; disulfide-linked In pregnancy serum, predominantly found as a disulfide-linked 2:2 heterotetramer with the proform of PRG2.
-1- SUBCELDUAR LOCATION: Secreted.
-1- TISSUE SPECIFICITY: High levels in placenta and pregnancy serum. In placenta, expressed in X cells in septa and anchoring villi, and in syncytiotrophoblasts in the chorionic villi. Lower levels are found in a variety of other tissues including kidney.
-1- Good, fibroblasts and osteoblasts.
-1- DEVELOPMENTAL STAGE: Present in serum and placenta during pregnancy; levels increase throughout pregnancy.
-1- INDUCTION: By * B-bromoadenosine-3', 5'-phosphate.
-1- INDUCTION: By * B-bromoadenosine-3', 5'-phosphate.
-1- INDUCTION: By * B-bromoadenosine-3', 5'-phosphate.
-1- FPM: There appear to be no free sulfhydryl groups.
-1- SIMILARITY: Belongs to peptidase family M43B.

"Identification of angiotensinogen and complement C3dg as novel proteins binding the proform of eosinophil major basic protein in human pregnancy serum and plasma.";
J. Baol. Chem. 270:13645-13651(1995).
-! FUNCTION: Metalloproteinase which specifically cleaves IGFBP-4 in the presence of IGF, resulting in release of bound IGF.
-!- CATALYTIC ACTIVITY: Cleavage of the 135-Met-|-Lys-136 bond in insulin-like growth factor binding protein (IGFBP)-4, and the 143-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hydrolase; Metalloprotease; Metal-binding; Zinc; Signal; Glycoprotein;

-!- TISSUE SPECIFICITY: Weakly expressed in most tissues, except in brain. Expressed at intermediate level in Drain, including cerebellum, substantia nigra, hippocampus and fetal brain. Overexpressed in some head and neck cancer cell lines.
-!- SIMILARITY: Belongs to the CSMD family.
-!- SIMILARITY: Contains 14 CUB domains.
-!- CAUTION: Ref.3 sequence differs from that shown due to a frameshift in position 939 that shortens the protein by 1021 residues in its N-terminus. It is unknown whether the sequence shown exists or whether Ref.3 is right, shortening the sequence in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nagase T., Kikuno R., Ohara O., "Prediction of the coding sequences of unidentified human genes. XXI. The complete sequences of 60 new cDNA clones from brain which code for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  phosphate.
-!- PATHWAY: Plays an important role in several metabolic pathways.
-!- SUBUNIT: Homodimer (By similarity).
-!- SIMILARITY: Belongs to the triosephosphate isomerase family.
                                                    (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STRAIN=BP-1;

"Cloning of two adenosine receptor subtypes from mouse bone marrow-derived mast cells.", IS2:4508-4515 (1994).
-: FUNCTION: Receptor for adenosine. The activity of this receptor is mediated by G proteins which activate adenylyl cyclase.
-: SUBCELLULAR LOCATION: Integral membrane protein.
-: SUBCELLULAR Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                      Gaps

3L J. Cell Biol. 145:605-618(1999).

1. FUNCTION: Binding to cells via a high affinity receptor, laminin of is thought to mediate the attachment, migration and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.

2. SUBUNIT: Laminim is a complex glycoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bound to each other by disulfide bonds into a cross-shaped molecule comprising one long and three short arms with globules at each end rising one long and three short arms with globules at each end some in second comprising one long and three short arms with globules at each comprising one long and three short arms with globules at each end arms a subcult. I subcation is a subunit of laminin-12.

2. SUBCELDUAR LOCATION: Extracellular.

2. SUBCELDUAR LOCATION: Extracellular.

3. SUBCELDUAR LOCATION: Dradly expressed in: skin, heart, lung, and the reproductive tracts.

3. SUBCELDUAR LOCATION: The alpha-helical domains I and II are thought to interact with other laminin chains to form a coiled coil structure.

3. SUMILARITY: Contains I laminin N-terminal domains.

3. SIMILARITY: Contains I laminin EGF-like domains.
                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. -!- COFACTOR: FMN (By similarity).
-!- PATHWAY: Vanillate degradation (vanillate is a key intermediate in the degradation of lignin).
-!- SIMILARITY: Belongs to the PDR/vanB family.
-!- SIMILARITY: In the C-terminal section; belongs to the 2Fe2S plant-

He is protein which inhibits thymidine incorporation in fetal calf protein which inhibits thymidine incorporation in fetal calf erythroid cells."

Biochem. J. 267:261-264(1990)

- FONGTION: Binds to various kinds of negatively charged substances such as heparin, phospholipids, and dextran sulfate. May prevent activation of the intrinsic blood coagulation cascade by binding to phospholipids on the surface of damaged cells.

- GUBCELLUIAR LOCATION: Secreted.

- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.
                                                                                                                                                                                                                                                 Gaps

0
gene Structure, a common polymorphism, and a high prevalence of antiphospholipid antibodies.";

Hum. Genet. 109:63-72/2001).

-!- FUNCTION: Binds to various kinds of negatively charged substances such as heparin, phospholipids, and dexrran sulfate. May prevent activation of the intrinsic blood coagulation cascade by binding to phospholipids on the surface of damaged cells.

-!- SUBCELLULAR LOCATION: Secreted (By similarity).

-!- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.

-!- SIMILARITY: Contains 4 Sushi (SCR) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (POTENTIAL).

                    S-adenosylmethionine decarboxylase proenzyme (EC 4.1.1.50) (AdoMetDC) (SamDC) [Contains: S-adenosylmethionine decarboxylase alpha chain; S-adenosylmethionine decarboxylase beta chain].
Trypanosoma brucei brucei.
                                                                                                                                                                                                                                                                             Submitted (JAN-1995) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine = (5-deoxy-5-adenosyl) (3-aminopropyl) methylsulfonium salt + CO(2).
-!- COFACTOR: PYTUVOYJ group.
-!- PATHMAY: Decarboxylation of S-adenosylmethionine provides the aminopropyl moiety required for spermidine and spermine biosynthesis from putrescine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (BY

(LUDW-) LUDWIG INST CANCER RES.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis, to cyclisation are used to interfere with anglogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy carefularisation or lymphangiogenesis, newscularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive trauma, substance-induced neovascularisation of the liver, excessive cramma, the peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inage blood vessels and lymphatic or brain. The peptides are used to inage blood vessels and lymphatic or brain. The peptides are also used to wearly selective to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and discord are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and

New polypeptides and polynucleotides, useful for treating diseases such as cancer, Alzheimer's disease, atherosclerosis, diseases associated with liver, comprises polypeptides and polynucleotides of open reading frame
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; Immunoglobulin superfamily protein; IgSF; Immune response; inflammatory response; cell-cell interaction; cell-surface recognition; neural disorder; immune system disorder; muscular disorder; perpoductive disorder; gastrointestinal disorder; pulmonary disorder; cardiovascular disorder; prolliferative disorder; common variable adhesion deficiency syndrome; AIDS; SCID; acquired immunodeficiency syndrome; anaemia; rheumatoid arthritis; Alzheimer; a disease; Crohn's disease; liver cancer; leukaemia; Hodgkin's lymphoma; Parkinson's disease; Huntingdon's disease; dementia; artherosclerosis; stroke; diabetes mellitus; Addison's disease; urticaria; severe combined immunodeficiency; antibody.
                                                                                                                                                                                                  The present invention provides the protein and coding sequences of human OREX, where X is any number between 1 and 132. These sequences can be used to diagnose and treat OREX related disorders, including cancer, hyperproliferative and dysproliferative disorders, incurdegenerative disorders, disorders, disorders call to organ transplantation or cardiovascular diseases, and may have cell proliferation or differentiation, cytokine, immunomodulatory, haematopoiesis regulating, tissue growth, inhibin or activin, chemotactic or chemokinetic, haemostatic or thrombolytic and/or antinflammatory activities. The present sequence is one of the OREX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The sequence is a Human Immunoglobulin superfamily, IgSF, protein, a diverse family of proteins involved in cell-cell interactions, cell-cal verse family of proteins involved in cell-cell interactions, cell-cal inflammatory responses. Polypeptides and antibodies directed to polypeptides of the present invention are useful to provide immunological probes for differential identification of tissues. Antibodies can be used to assay levels of polypeptides encoded by polymuclectides of the invention. Polypeptides of the present invention can be used to treat or disorders, muscular disorders, immune system disorders, pulmonary disorders, reproductive disorders, immune system of sorders, proliferative disorders, and/or cancerous diseases and disorders, proliferative disorders, and/or cancerous diseases and conditions. Polymuclectides of the invention are also useful in treating the above disorders. Examples of the disorders include common variable adhesion deficiency syndrome, acquired immunodeficiency syndrome (C anaemia, rheumatoid arthritis, Alzheimer's disease, Crohn's disease, C liver cancer, leukaemia, Hodgkin's lymphoma, parkinson's disease, dementia, artherosclerosis, stroke, diabetes conditions, Addison's disease, urticaria, severe combined immunodeficiency (SCID). Many more examples of diseases and disorders are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

(CURA-) CURAGEN CORP.

щ Fernandes Vernet C, Shimkets RA, Lichenstein H,

WPI; 2001-648134/74. N-PSDB; AAF87127. Novel human polypeptides and the nucleic acids that encode them useful for preventing, diagnosing and treating e.g. cancer, inflammation and for preventing, di immune disorders.

Claim 1; Page 50-52; 141pp; English.

Cutivities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They be used to treat disorders associated with inappropriate NOVX expression. They are used to treat disorders associated with decreased expression. They crectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein. They are used to produce NOVX patients own production of protein. They are used to produce NOVX creativity of protein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may also be used as antigens in the production of antibodies (Abs) against NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs are used to down regulate expression and activity. The anti-NOVX Abs are used to down regulate expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated contractive the norm of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated contractive the norm of NOVX in samples. The NOVX protein. NOVI, NOV3, NOV5, NOV7, NOV9-11 and NOV13-16 have casein kinase in phosphorylation sites characteristic of contractive. NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular (e.g. Peutz-Jeghers syndrome, cellular proliferation and contraception). MoV2-3, NOV6 and NOV9 are homologous to the epidermal growth factor (EGF) like Super family and are involved in, e.g. regulation of cell development, apoptosis, cell addhesion, growth migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and cellular adhesion disorders. serine/threonine kinases, and are used to treat kinase-related disorders NOV6-10 are homologous to EGF-like fibrillin proteins and are used to treat cardiovascular disease e.g. hypertrophic cardiomyopathy, long-QT This sequence is the NOV16 protein. The invention relates to the NOV1syndrome and marfan syndrome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence is the NOV15 protein. The invention relates to the NOV1-
NOV16 proteins, and their coding sequences. The proteins have Cytostatic;
NOV16 proteins, antihifammatory; immunodulatory; and cardiovascular
activities. The sequences may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate NOVX expression. They
may be used to treat disorders associated with decreased expression. Dy
certifying mutations or deletions in a patient's genome that affect the
activity of protein by expressing inactive proteins or to supplement the
activity of protein by expressing inactive proteins or to supplement the
patients own production of protein. They are used to produce NOVX
proteins, by inserting the nucleic acid into a cell and culturing it to
express the protein. The DNA may be used as DNA probes in assays to
detect and quantitate the presence of similar DNAs in samples, and which
as antigens in the production of antibodies (Abs) against NOVX and in
assays to identify modulators of NOVX expression and activity. The anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOVX Abs and antegonist are used to down regulate expression and activity. The anti-NoVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat kinase-related disorders
                                                                                                                                                                                                                                                                                                                       Novel human polypeptides and the nucleic acids that encode them useful for preventing, diagnosing and treating e.g. cancer, inflammation and

The invention relates to a nucleic acid encoding a novel G3b/C4b

Complement receptor (CR)-like nucleic acid molecule. The C3b/C4b CR-like

polypeptide and nucleic acid molecules may be used to treat, prevent,
ameliorate, diagnose and/or detect diseases such as immune system

disorders such as rheumatoid arthritis, psoriatic arthritis, inflammatory
arthritis, osteoarthritis, inflammatory joint disease, autoimmune

clisease, multiple sclerosis, lupus, inflammatory bowel disease,
transplant rejection, nervous system disorders (e.g. Alzheimer's

disease), ischaemic conditions, metabolic disorders (e.g. Alzheimer's

disease) infertility. The invention is useful in gene therapy. The

present sequence is human C3b/C4b complement receptor like protein. Note:

The present sequence is stated to be the same as that referred to as SEQ

ID NO:2 (AAE20900) shown in page 176-189 of the specification. However
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, C3b/C4b complement receptor-like molecule; immune system disorder; gene therapy; rheumatoid arthritis; psoriatic arthritis; osteoarthritis; inflammatory inflammatory joint disease; Alzheimer's disease; multiple sclerosis; inflammatory bowel disease; nervous system disorder; transplant rejection; autoimmune disease; ischaemic condition; nootropic; metabolic disorder; immunomodulatory; neuroprotective; diabetes; lupus; infertility; vasodilator; obesity; cardiant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human C3b/C4b complement receptor like protein #1, alternative version.

The invention relates to a nucleic acid encoding a novel C3b/C4b complement receptor (CR)-like nucleic acid molecule. The C3b/C4b CR-like Complement receptor (CR)-like nucleic acid molecules may be used to treat, prevent, ameliorate, diagnose and/or detect diseases such as immune system disorders such as rheumatoid arthritis, psoriatic arthritis, inflammatory arthritis, psoriatic arthritis, inflammatory disease, autoimmune conferes withing salerosis, lupus, inflammatory bowel disease, transplant rejection, nervous system disorders (e.g. Alzheimer's disease) ischaemic conditions, metabolic disorders (e.g. Alzheimer's catabolate for infertility. The invention is useful in gene therapy. The present sequence is human C3b/C4b complement receptor like protein, alternative version. Note: The present sequence is stated to be the same cas that referred to as SEQ ID NO:2 (AABE20787) shown in figure 1 of the specification. However the sequences differ at position 695

The invention relates to a nucleic acid encoding a novel C3b/C4b complement receptor (CR)-like nucleic acid molecule. The C3b/C4b CR-like polypeptide and nucleic acid molecules may be used to treat, prevent, ameniotrate, diagnose and/or detect diseases such as immune system disorders such as rheumatoid arthritis, psoriatic arthritis, inflammatory arthritis, osteoarthritis, inflammatory joint disease, autoimmune disease, multiple sclerosis, lugus, inflammatory bowel disease, transplant rejection, nervous system disorders (e.g. Alzheimer's disease), ischaemic conditions, metabolic disorders (e.g. obesity and diabetes) and infertility. The invention is useful in gene therapy. The present sequence is rat C3b/C4b complement receptor like protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, C3b/C4b complement receptor-like molecule; immune system disorder; gene therapy, rheumatoid arthritis; psoriatic arthritis; osteoarthritis; inflammatory dint disease; Alzheimer's disease; multiple sclerobis; inflammatory bowel disease; nervous system disease; transplant rejection; autoimmune disease; ischaemic condition; nootropic; metabolic disorder; immunomodularory; neuroprotective; diabetes; lupus; infertility; vasodilator; obesity; cardiant.
                                                                                                           Nucleic acid encoding a novel C1b/C4b Complement Receptor-like nucleic acid molecule, useful for treating, preventing and diagnosing rheumatoid arthritis, psioriatic arthritis, inflammatory arthritis, and multiple

The invention relates to a nucleic acid encoding a novel C3b/C4b complement receptor (CR)-like nucleic acid molecule. The C3b/C4b CR-like polypeptide and nucleic acid molecules may be used to treat, prevent, amaliorate, diagnose and/or detect diseases such as immune system disorders such as rheumatoria arthritis, psoriatic arthritis, inflammatory arthritis, posteoarthritis, inflammatory joint disease, autoimmune disease, multiple sclerosis, lupus, inflammatory bowel disease, disease, ransplant rejection, nervous system disorders (e.g. Alzheimer's disease), ischaemic conditions, metabolic disorders (e.g. obesity and diabetes) and infertility. The invention is useful in gene therapy. The present sequence is stated to be the same as that referred to as SEQ ID NO:7 (AAE20901) shown in page 239-251 of the specification. However the sequences differ at position 726
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, C3b/C4b complement receptor-like molecule; immune system disorder; gene therapy; rheumatoid arthritis; psoriatic arthritis; osteoarthritis; inflammatory arthritis; inflammatory joint disease; Alzheimer's disease; multiple solerosis; inflammatory bowel disease; nervous system disorder; transplant rejection; autoimmune disease; ischaemic condition; nootropic; metabolic disorder; immunomodulatory; neuroprotective; diabetes; lupus; infertility; vasodilator; obesity; cardiant.
                                                                                                                                                           Nucleic acid encoding a novel C3b/C4b Complement Receptor-like nucleic acid molecule, useful for treating, preventing and diagnosing rheumatold arthritis, psioriatic arthritis, inflammatory arthritis, and multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human C3b/C4b complement receptor like protein #2, alternative version.

The invention relates to a nucleic acid encoding a novel C3b/C4b

Complement receptor (CR)-like nucleic acid molecule. The C3b/C4b CR-like

Complement receptor (CR)-like nucleic acid molecule. The C3b/C4b CR-like

Dolypoptide and nucleic acid molecules may be used to treat, prevent,

ameliorate, diagnose and/or detect diseases such as immune system

disorders such as rheumatoid arthritis, psoriatic arthritis, inflammatory

carbritis, osteoarthritis, inflammatory joint disease, autoimmune

carbritis, osteoarthritis, inflammatory bowel disease,

transplant rejection, nervous system disorders (e.g. Alzheimer's

ciasease), ischaemic conditions, metabolic disorders (e.g. Alzheimer's

disease), ischaemic conditions, metabolic disorders (e.g. Abcheimer's

ciabetes, and infertility. The invention is useful in gene therapy. The

present sequence is human C3b/C4b complement receptor like protein,

alternative version. Note: The present sequence is stated to be the same

condition. However the sequences differ at position 726

specification. However the sequences differ at position 726

(CURA-) CURAGEN CORP.

WPI; 2002-643486/69. N-PSDB; ABS64375 New NOVX polypeptides and polynucleotides useful for treating or preventing e.g. neurodegenerative diseases, neurological disorders, cardiovascular diseases muscular diseases and disorders, or immunological diseases.

Claim 1; Page 13-14; 299pp; English.

The present invention relates to new NOVX polypeptides. The polypeptides, polypucleotides and antibodies are useful in the manufacture of a medicament for treating or preventing neurodegenerative diseases (e.g. C. Alzheimer's disease, Parkinson's disease, or Huntington's disease).

Alzheimer's disease, Parkinson's disease, or Huntington's disease).

C. Alzheimer's disease, Parkinson's disease (e.g. acute heart failure, comental retardation), cardiovascular diseases and disorders, retinal diseases (including those involving photoreception, dasforders, retinal diseases (including those involving photoreception, deaffness and keratinisation disorders, inflammatory and immune diseases, bacterial, fungal, protozoal and viral infections, and reproductive compands that modulate the NOVX protein activity or expression, as well as to treat disorders characterised by insufficient or excessive production of NOVX protein forms that have decreased or aberrant activity compared to NOVX wild type protein, such as diabetes, obseity, metabolic disturbances associated with chronic diseases and various cancers, infections designed and various daslibated activity compared to nove the protein, such as diabetes, obseity, metabolic disturbances associated with chronic diseases and various cancers, infections diseases and various dyslipidaemias. The nucleic activity companded to many the modulation of the companded of sequences of the invention may be used in chromosome mapping, identifying an individual from minute biological samples (tissue typing), and in forensic identification of a biological sample. The present amino acid sequence represents a NOVX protein of the invention Sequence 95 AA;

```
Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by a cares. The disorders include SAPHO syndrome (synovitis, acne, bustulosis, hypertosis and osteomylitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central rerous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by contained in electronic format directly from WIPO at this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                            SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for

concoling a Propionibacterium acnes protein. The invention also relates to encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention and to accompassion vectors and host cells comprising a diditionally encompasses expression vectors and host cells comprising a contention, fusion proteins comprising a polypeptide of the invention, a immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared collypeptide and an isolated T cell population comprising P. acnes polypeptides, via this method; a vaccine composition (comprising P. acnes polypeptides, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in collypeptides, polypucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acnes collypeptides are useful for diagnosing, preventing or treating acnes collypeptides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the estimates of an immune response against P. acnes, or for treating acnes and the kit is useful for performing a diagnostic assay. The present conding frame) contained within the P. acnes polynucleotides of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases in which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                        Cytostatic; Anti-inflammatory; Osteopathic; Neuroprotective; Nootropic; Gene Therapy; human; secretory protein; membrane proteins; cancer; inflammatory disease; osteoporosis; neurological disease.
                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                            ..

The invention relates to a bait-prey complex between two adipocyte polypeptides, or between two polynucleotides encoding adipocyte polypeptides. The livention also relates to Selected Interacting Domain (SID) polypeptides which interact with selected bait polypeptides; comprising an adipocyte polynucleotide encoding SID polypeptides; vectors comprising SID polynucleotide or a SID-encoding vector; a method of selecting for a compound which modulates interactions between adipocyte polypeptides; adipocyte modulator compounds identified using the method; a plarmaceutical composition comprising an adipocyte modulator, or a SID-encoding vector or monounds identified using the method; a plarmaceutical composition comprising an adipocyte modulator or a SID-encoding vector or host cell; and a protein chip comprising adipocyte bait polypeptides. The bait-prey complexes of the invention are useful for selecting a compound that inhibits or a civiates protein-protein interactions between adipocyte polypeptides. The modulatory compounds identified can be used in the treatment of metabolic diseases such as obesity, lipodystrophy and type 2 diabetes mellitus, and in the modulation of adipogenesis. The present sequence represents a specifically claimed adipocyte SID prey polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ·
